**Josephine van Zeben : The Allocation of Regulatory Competence in the EU Emissions Trading Scheme (Cambridge Studies in European Law and Policy)** before purchasing it in order to gage whether or not it would be

worth my time, and all praised *The Allocation of Regulatory Competence in the EU Emissions Trading Scheme* (Cambridge Studies in European Law and Policy):

The European Union's Emissions Trading System (EU ETS) is the world's largest carbon trading market. This book offers a new perspective on the EU ETS as a multi-level governance regime, in which the regulatory process is composed of three distinct 'competences' - norm setting, implementation, and enforcement. Are these competences best combined in a single regulator at one level of government or would they be better allocated among a variety of regulators at different levels of government? The combined legal, economic, and political analysis in this book reveals that the actual allocation of competences within the EU ETS diverges from a hypothetical ideal allocation in important ways, and provides a political economy explanation for the existing allocation of norm setting, implementation and enforcement competences among various levels of European government.

"This book is destined to stun lawyers with an interest in regulation as a means to solve problems, due to its extra-legal dimension and the wealth of insights the author thus provides ... this book offers a precise analysis of the implications of competence allocation in an optimal and a real-life setting." Andrea Keessen, *Common Market Law*

About the Author Josephine van Zeben is a visiting postdoctoral researcher at The Vincent and Elinor Ostrom Workshop in Political Theory and Policy Analysis, Indiana University, Bloomington. Since 2012, she has been teaching environmental regulation at ETH Zurich as a guest lecturer.
