**From Brand: Island Press : The Endangered Species Act at Thirty: Vol. 2: Conserving Biodiversity in Human-Dominated Landscapes** before purchasing it in order to gage whether or not it would be worth my time, and all praised The Endangered Species Act at Thirty: Vol. 2: Conserving Biodiversity in Human-Dominated Landscapes:

A companion volume to *The Endangered Species Act at Thirty: Renewing the Conservation Promise*, published by Island Press in fall 2005, this new book examines the key policy tools available for protecting biodiversity in the United States by revisiting some basic questions in conservation: What are we trying to protect and why? What are the limits of species-based conservation? Can we develop new conservation strategies that are more ecologically and economically viable than past approaches?

"After thirty years, the Endangered Species Act has restored species as charismatic as the bald eagle and prevented extinctions and ecosystem loss. This is the book that lays out the act's many successes, how it might be improved, and all the necessary details in between."
