**From Brand: NYU Press : The Global Flow of Information: Legal, Social, and Cultural Perspectives (Ex Machina: Law, Technology, and Society)** before purchasing it in order to gauge whether or not it would be worth my time, and all praised The Global Flow of Information: Legal, Social, and Cultural Perspectives (Ex Machina: Law,

Technology, and Society):

The Internet has been integral to the globalization of a range of goods and production, from intellectual property and scientific research to political discourse and cultural symbols. Yet the ease with which it allows information to flow at a global level presents enormous regulatory challenges. Understanding if, when, and how the law should regulate online, international flows of information requires a firm grasp of past, present, and future patterns of information flow, and their political, economic, social, and cultural consequences. In *The Global Flow of Information*, specialists from law, economics, public policy, international studies, and other disciplines probe the issues that lie at the intersection of globalization, law, and technology, and pay particular attention to the wider contextual question of Internet regulation in a globalized world. While individual essays examine everything from the pharmaceutical industry to television to information warfare against suspected enemies of the state, all contributors address the fundamental question of whether or not the flow of information across national borders can be controlled, and what role the law should play in regulating global information flows. Contributors: Frederick M. Abbott, C. Edwin Baker, Jack M. Balkin, Dan L. Burk, Miguel Angel Centeno, Dorothy E. Denning, James Der Derian, Daniel W. Drezner, Jeremy M. Kaplan, Eddan Katz, Stanley N. Katz, Lawrence Liang, Eli Noam, John G. Palfrey, Jr., Victoria Reyes, and Ramesh Subramanian

*The Global Flow of Information* is an outstanding and cohesive map of the dynamic transition to a globally networked society. Subramanian and Katz have brilliantly assembled clear, concise and insightful chapters that enduringly show remarkable interconnections between the internet's power to change information flows and governance and the information flows power to change the internet and society. A must have, must read book.
