Aurora Plomer : The Law and Ethics of Medical Research: International Bioethics and Human Rights before purchasing it in order to gage whether or not it would be worth my time, and all praised The Law and Ethics of Medical Research: International Bioethics and Human Rights:

The growing globalization of medical research and the application of new biotechnologies in morally contested areas has forced a revision of international ethical guidelines. This book examines the controversies surrounding biomedical research in the twenty-first century from a human rights perspective, analyzing the evolution and changes in form and content of international instruments regulating the conduct of biomedical research. The approach adopted is comparative and includes an evaluation of human rights and UK and US law on embryonic stem cell research, the HIV/AIDS trials in the developing world, the Alder Hey Inquiry and the human radiation and nerve gas experiments on human subjects in the US and the UK. This is the first book to analyze some of the major issues in biomedical research today from an international, comparative human rights perspective.

'The book is a rich exploration of a complex set of questions, and it provides an important, fertile context for the asking ethical questions in the globalization of medical research.' - K. W. Wildes, *Human Rights*, vol. 9 no. 1 (2008)

'...this is a worthy and stimulating read which draws profitably from the authors legal and philosophical experience, and it represents a useful tool for anyone who is interested in human subject research, bioethics and emerging biolaw.' - Shawn H.E. Harmon, *Script-ed*, vol. 4 no. 2 (2007)

'...there are two reasons why the book should have appeal to anyone interested in this area of law and ethics. First, it provides an articulate and interesting discussion of the main legal and ethical developments in this area and so will be a valuable resource. Secondly, regardless of whether you agree with Plomer's approach or all of her arguments, the book should stimulate thought and debate.' - Alasdair Maclean, *Medical Law*, Vol. 14 no. 2 (2006)

About the Author Aurora Plomer is Professor of Law and Bioethics, and the Director of the Sheffield Institute of Biotechnological, Law and Ethics (SIBLE) at the University of Sheffield, UK.
