Joseph R. Carvalko , Cara Morris : The Science and Technology Guidebook for Lawyers before purchasing it in order to gage whether or not it would be worth my time, and all praised The Science and Technology Guidebook for Lawyers:

Legal professionals who work in areas where law, science, and technology converge, don't need a PhD to effectively represent their clients, but they do need a grounding in how science and technology are integrally related in today's society. Understanding how science works enables a lawyer to assess how a scientific discovery or technological

innovation affects a client's interests. This book provides an easily understandable explanation of particular sciences and technologies by analyzing specific cases. The book examines the question "What is science?" through two different lenses: the scientist and the legal practitioner. The text focuses on the important role that definition and interpretation play in framing the legal issues dependent on science and technology. Subsequent chapters cover genetic engineering, communications tech, forms of technology protection, Patents and transformative technology, issues in biotech, and much more.

"All I can say is that **THIS BOOK IS ABSOLUTELY BRILLIANT!**" (Gerald Gluck, Ph.D., LMFT, PA BCN, (Board Certified In Neurofeedback) Sr. Fellow 2 Center for Family Counseling and Biofeedback N/A, N/A) About the Author: Joseph R. Carvalko is a lawyer practicing in technology law and intellectual property in Milford, CT. Cara Morris is a partner in Hoffman and Morris, PL, Florida where she represents clients as their needs relate to technology law and civil litigation.
