Lola Romanucci-Ross, Laurence R. Tancredi : When Law and Medicine Meet: A Cultural View (International Library of Ethics, Law, and the New Medicine) before purchasing it in order to gage whether or not it would be worth my time, and all praised When Law and Medicine Meet: A Cultural View (International Library of Ethics, Law,

and the New Medicine):

What happens when two systems, law and medicine, are joined in the arena of the court? This work deals with the structure and the premises of two diverse discourse models; the approach is anthropological. Several chapters are preponderantly based on legal research, addressing cases requiring testimony by expert witnesses on recent technologies used in the laboratories of medical scientists. Descriptions of other societies and cultures consider the identical problems of rights, privileges, and duties, and provide perspectives to cultural self-knowledge. This volume can be used as a text for courses taught in medical schools and law schools. It will be of particular interest to students taking courses in health science, public health, medical anthropology, forensic anthropology, psychology, sociology, public justice, behavioral sciences, forensic psychiatry, legal anthropology, social welfare, as well as courses on research models.

"At times difficult scientific and legal concepts are discussed in an entirely clear, accessible way - in an engaging even-paced writing style." "The O.J. Simpson trial is particularly gripping; going beyond an analysis of assessing scientific methods in a court of law, the authors insightfully discuss ideological interpretations that 'facts' and perceptions engender in terms of race, class, and ethnicity." "The authors are accomplished professionals who have spent a lifetime studying and practicing the subjects they address and who have reached in surrounding disciplines to take and make connections for all concerned. This is medical anthropology at its most thoughtful and practical." From the Back Cover

What happens when two systems, law and medicine, are joined in the arena of the court? This work deals with the structure and the premises of two diverse discourse models; the approach is anthropological. Several chapters are preponderantly based on legal research, addressing cases requiring testimony by expert witnesses on recent technologies used in the laboratories of medical scientists. Descriptions of other societies and cultures consider the identical problems of rights, privileges, and duties, and provide perspectives to cultural self-knowledge. This volume can be used as a text for courses taught in medical schools and law schools. It will be of particular interest to students taking courses in health science, public health, medical anthropology, forensic anthropology, psychology, sociology, public justice, behavioral sciences, forensic psychiatry, legal anthropology, social welfare, as well as courses on research models. "This book illuminates our path through the largely uncharted terrain of two diverse systems of reasoning, law and medicine, as they interact in the courts. Through cultural, historical and contemporary examples such as the O.J. Simpson case, it leads us to a new way of knowing." Igor Grant, Distinguished Professor of Psychiatry and Director of the HIV Neurobehavioral Research Center, University of California, San Diego "Provides a critical framework for considering science as truth and illustrates the political nature of legal functioning. It will enlighten the intelligent lay person and reward the expert as it provides compressed moments of historical and cultural analyses that would make a fine novelist proud". Leonard V. Kaplan, Mortimer Jackson Professor of Law, University of Wisconsin "A ground-breaking and original contribution which transcends the isolation between medical and legal thought systems. Refreshingly free of jargon, this is medical anthropology at its most thoughtful and practical, and should be required reading wherever doctors, lawyers and medical anthropologists are trained". Ivan Brady, Distinguished Teaching Professor and Chair, Department of Anthropology, State University of New York (Oswego) "The O.J. Simpson trial is particularly gripping. Science in the laboratory is contrasted with "forensic science", and the epistemology of perception and ideological interpretations are also insightfully discussed. An excellent and well-written book. Hugo G. Nutini, University Professor of Anthropology, University of Pittsburgh
