Will It Sell? How to Determine If Your Invention Is Profitably Marketable (Before Wasting Money on a Patent):

Describes many inexpensive ways inventors can figure out, while protecting all patent rights, what their idea's real value is long before it's necessary to spend money on the patent. Dozens of Internet and other resources are provided with complete instructions for using them to your best advantage. This book is designed as the first book a new inventor should read to figure out what they need to do, where they can get help, and how to avoid the costly pitfalls that every inventor faces. The marketing information provided and the many referrals to other resources will also be valuable to experienced inventors seeking to expedite the costly process of entering an unknown market.
